

AGRI PROTOCOL

For Dragon Fruit

APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.

Nutriplant SL

- Soak 15 to 30 minutes before planting or spray diluted solution to the cuttings.
- Dilute 2 milliliters of Nutriplant SL in 1 liter of water.

Nutriplant AG and Zinc

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG plus 100 milliliters of Nutriplant Zinc plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant AG plus 1 liter of Nutriplant Zinc plus 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG and Nutriplant Zinc before mixing it with water.
- Spray the Nutriplant AG and Nutriplant Zinc solution on-set of flowering approximately 8 months after planting.
- Second spraying of Nutriplant AG will be done during present of the flower.

For Dragon Fruit

Nutriplant NPK

- Dilute 100 milliliters (10 tablespoons) of Nutriplant NPK plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant NPK plus 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water. Nutriplant NPK can be applied during fruit set.

Nutriplant K

- Dilute 100 milliliters (10 tablespoons) of Nutriplant K plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant K plus 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant K before mixing it with water. Nutriplant K can be applied when fruits already develop before bagging.

For Dragon Fruit Cuttings

Nutriplant SL plus APSA 80

- For seedling nursery, soak cuttings on Nutriplant SL solution for 15 to 30 minutes.
- Dilute 2 milliliters of Nutriplant SL per 1 liter of water.
