

## AGRI PROTOCOL

# For Sugarcane

### APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) of APSA 80 in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution directly to the soil after plowing.
- Spray 10 to 12 spray loads of APSA 80 per hectare as soil conditioner.
- For dry soil, dilute 1 liter of APSA 80 into 2 drums of water.
- For wet soil, dilute 1 liter of APSA 80 into 1 drum of water.

### Nutriplant SL

- For preparation of solution for soaking, dilute Nutriplant SL in water at 250 milliliters per 125 liters of water. Use 500 milliliters of Nutriplant SL per hectare of cane points.
- Soak 2 laksa of cane points to the solution 30 minutes before planting or spray to furrow with cane points before covering the soil.
- Spraying of 4 tablespoons of Nutriplant SL per 16 liters of solution to cane points in dripping wet prior to planting can also be done (1 hectare = average 10 to 12 knapsacks).

# For Sugarcane

## Nutriplant AG and ZN

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG and 100 milliliters (10 tablespoon) of Nutriplant ZN and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant AG and 1 liter of Nutriplant ZN and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG and Nutriplant ZN before mixing it with water.
- Spray Nutriplant AG and Nutriplant ZN solution 30 days after planting (DAP).

## Nutriplant NPK

- Dilute 100 milliliters (10 tablespoon) of Nutriplant NPK and 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant NPK and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Spray Nutriplant NPK solution 60 days after planting (DAP).

## Nutriplant K

- Dilute 100 milliliters (10 tablespoons) of Nutriplant K and 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter or Nutriplant K and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant K before mixing it with water.
- Spray Nutriplant K solution 90 days after planting (DAP).
