

AGRI PROTOCOL

For Banana

APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) of APSA 80 in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.
- Spray 10 to 12 spray loads of APSA 80 per hectare as soil conditioner.

Nutriplant SL

- For preparation of solution for drenching, dilute Nutriplant SL in water at 250 milliliters per 125 liters of water. Drench 0.5 to 1.0 liter of Nutriplant SL solution per hill immediately after transplanting.

For Banana

Nutriplant AG

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1liter of Nutriplant AG and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Begin spraying Nutriplant AG solution immediately or 5 days after transplanting and 30 days thereafter for 6 months.

Nutriplant NPK

- Dilute 100 milliliters (10 tablespoons) of Nutriplant NPK and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant NPK and 65 milliliters (6.5 tablespoons) APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Nutriplant NPK solution will be sprayed at fruiting stage.

Nutriplant K

- Dilute 100 milliliters (10 tablespoons) of Nutriplant K and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant K and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant K before mixing it with water. Nutriplant K will be sprayed before bagging.
