

AGRI PROTOCOL

# For Onion

## **APSA 80**

- For land preparation, dilute 8 tablespoons (80 milliliters) of APSA 80 in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.
- Spray 10 to 12 knapsack loads of APSA 80 per hectare as soil conditioner.
- APSA 80 can be mixed with all kinds of chemicals. Dilute 5 milliliters of APSA 80 in 16 liters of water and mix appropriate amount of pesticide and foliar fertilizer.

## **Nutriplant SD**

- Mix Nutriplant SD with seeds before planting at 45 to 65 grams Nutriplant SD in 1 kilogram of seeds. Keep the seeds dry during mixing.
- Be sure to coat the planting material before planting it.

# For Onion

## **Nutriplant AG**

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant AG and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Spray the Nutriplant AG solution 20 to 30 days after planting (DAP).
- Nutriplant AG can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant AG solution late in the afternoon or early in the morning.

## **Nutriplant NPK**

- Dilute 100 milliliters (10 tablespoons) of Nutriplant NPK and 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant NPK and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Spray Nutriplant NPK 40 to 45 days after planting.
- Nutriplant NPK can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant NPK solution late in the afternoon or early in the morning.
