

AGRI PROTOCOL

For Celery

APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.
- APSA 80 can be mixed with all kinds of chemicals. Dilute 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water and mix with appropriate amount of pesticide and foliar fertilizer.

Nutriplant SD

- 45 to 65 grams of Nutriplant SD can be mixed in 1 kilogram of seeds or as long as the seeds are coated evenly.
- Keep the seeds dry during mixing.

For Celery

Nutriplant AG

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG and 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Spray Nutriplant AG 7 days after transplanting.
- Repeat spraying twice a month until harvest.
- Nutriplant AG can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant AG solution late in the afternoon or early in the morning.

Nutriplant K

- Nutriplant K can be applied if necessary.
- Dilute 100 milliliters (10 tablespoons) of Nutriplant K and 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water. Always shake the bottle of Nutriplant K before mixing it with water.
- Nutriplant K can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant K solution late in the afternoon or early in the morning.
