

AGRI PROTOCOL

For Mango

APSA 80 and Potassium Nitrate

- Spray potassium nitrate at right rate for flower inducer. Consider at least 80 percent of the leaves are fully mature for better enhancement of flowering.
- Mix APSA 80 at dilution rate of 5 milliliters per 16 liters of water or 65 milliliters (6.5 tablespoons) per 200 liters of water together with potassium nitrate.

Nutriplant AG and ZN

- Dilute 100 milliliters (10 tablespoon) of Nutriplant AG and 100 milliliters (10 tablespoon) of Nutriplant ZN and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant AG and 1 liter of Nutriplant Zn and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG and Nutriplant ZN before mixing it with water.
- Spray Nutriplant AG and Nutriplant ZN at pre to bloom stage.

For Mango

Nutriplant NPK

- Dilute 100 milliliters (10 tablespoons) Nutriplant NPK and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1liter Nutriplant NPK and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Spray Nutriplant NPK at pea size like fruit.
- Nutriplant NPK can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant NPK solution late in the afternoon. Nutriplant NPK solution can also be applied early in the morning.

Nutriplant K

- Dilute 100 milliliters (10 tablespoons) of Nutriplant K and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant K and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant K before mixing it with water.
- Spray Nutriplant K at thumb size like fruit or before bagging.
- Nutriplant K can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant K solution late in the afternoon. Nutriplant K solution can also be applied early in the morning.

For Mango Seedlings

Nutriplant NPK and APSA 80

- Spray Nutriplant NPK every 15 days interval
- Continue spraying until seedlings are ready to be transplanted.
- 10 tablespoons of NPK and 1 teaspoon of APSA 80 per 16 liters of water.
