

AGRI PROTOCOL

For Beans and Peas

APSA 80

- For land preparation, dilute 8 of tablespoons (80 milliliters) in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.
- APSA 80 can be mixed with all kinds of chemicals. Dilute 5 milliliters (1 teaspoon) APSA 80 in 16 liters of water and mix with appropriate amount of pesticide and foliar fertilizer.

Nutriplant SD

- 45 to 65 grams of Nutriplant SD can be mixed in 1 kilogram of seeds.
- Keep the seeds dry during mixing.

For Beans and Peas

Nutriplant AG

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Spray Nutriplant AG 15 to 20 days after planting.
- Second application will be done at pre-bloom stage.
- Nutriplant AG can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant AG solution late in the afternoon or early in the morning.

Nutriplant NPK

- Dilute 100 milliliters (10 tablespoons) of Nutriplant NPK plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Spray Nutriplant NPK at fruit set stage. Nutriplant NPK can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant NPK solution late in the afternoon or early in the morning.
