

AGRI PROTOCOL

For Tobacco

APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution directly to the soil after plowing.
- Spray 10 to 12 spray loads of APSA 80 per hectare as soil conditioner.

Nutriplant SD

- For 1 hectare farm, 20 to 25 grams of tobacco seeds will be needed. Apply Nutriplant SD to the seeds at the rate of 1 to 1.5 grams per 20 to 25 grams of tobacco seeds. Be sure to mix Nutriplant SD thoroughly.
- Broadcast the mixture of tobacco seeds plus Nutriplant SD plus wood ash or fine sand to the seed bed evenly.
- Apply the appropriate cultural practices for watering the seedbed, thinning of mulch, thinning and pricking of seedlings, pest management and hardening.

For Tobacco

Nutriplant AG

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant AG plus 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Spray Nutriplant AG solution 2 weeks after transplanting.
- Repeat spraying for 4 weeks after transplanting.
- Nutriplant AG can be mixed with pesticides to minimize labor in spraying. For best result, spray in the afternoon. Nutriplant AG can also be sprayed early in the morning.

Nutriplant NPK

- Dilute 100 milliliters (10 tablespoons) of Nutriplant NPK plus 5 milliliters (1 teaspoon) of APSA 80 in 16 liters of water or 1 liter of Nutriplant NPK plus 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant NPK before mixing it with water.
- Nutriplant NPK solution will be spray 6 weeks after transplanting.
- For best result, spray in the afternoon. Nutriplant NPK can also be sprayed early in the morning.
