

AGRI PROTOCOL

For Ginger

APSA 80

- For land preparation, dilute 8 tablespoons (80 milliliters) of APSA 80 in 16 liters of water or 800 milliliters to 1 liter of APSA 80 in 1 drum of water and spray the solution to the soil 2 to 3 days before planting.
- Spray 10 to 12 knapsack loads of APSA 80 per hectare as soil conditioner.
- APSA 80 can be mixed with all kinds of chemicals. Dilute 5 milliliters of APSA 80 in 16 liters of water and mix appropriate amount of pesticide and foliar fertilizer.

Nutriplant SD

- Mix Nutriplant SD with seeds before planting at 45 to 65 grams of Nutriplant SD in 1 kilogram of seeds. Keep the seeds dry during mixing.
- Be sure to coat the planting material before planting it.
- Note: Depending on how many kilos of planting material (Ginger)

For Ginger

Nutriplant AG

- Dilute 100 milliliters (10 tablespoons) of Nutriplant AG and 5 milliliters (1teaspoon) of APSA 80 in 16 liters of water or 1 liter Nutriplant AG and 65 milliliters (6.5 tablespoons) of APSA 80 per drum (200 liters) of water. Always shake the bottle of Nutriplant AG before mixing it with water.
- Spray the Nutriplant AG solution 15 to 20 days after planting (DAP).
- Repeat application once a month until maturity for 8 months.
- Nutriplant AG can also be mixed with pesticides to minimize spraying labor cost. For best results, apply Nutriplant AG solution late in the afternoon or early in the morning.
